Delicious Type

Zosimo is a *neo-grotesque* typeface created by designer Ron Gilad (Delicious Type) in cooperation with renowned typographer Oded Ezer based on his ubiquitous **Alchemist** typeface.

Carefully drawn curves, robust shapes and a range of OpenType features make **Zosimo** a great choice for designing logotypes, signage, titling, texts and more.

Zosimo now comes in three families: **Standard** (full Latin support), **Cyrillic** (basic Latin and Cyrillic) and **Pro** (all included).

Totalling in 9 weights, roman and italic, **Zosimo** can accommodate all your type-related design needs in one big happy family.

Regular

Zosimo comes in 9 weights. Combine different weights when you set your text in order to take advantage of the full power and features of the typeface.

Small caps

Zosimo comes with a full set of true small caps. They were designed specifically to retain the same stroke width of the lowercase letters. The Cyrillic and Pro versions also have Cyrillic small caps.

SMALL CAPITALS are uppercase characters set at the same height and weight as surrounding lowercase letters or text figures. **THEY ARE USED IN RUNNING TEXT** to prevent capitalized words from appearing too large on the page, and as a method of **EMPHASIS** or distinctiveness for text alongside or instead of italics, or when boldface is inappropriate.

МАЛЫЕ ЗАГЛАВНЫЕ, или КАПИТЭЛЬ — начертание в гарнитуре, в которой строчные знаки выглядят как уменьшенные заглавные. **ЧТОБЫ ПОДЧЕРКНУТЬ РАЗНИЦУ МЕЖДУ КАПИТЕЛЬНОЮ И СТРОЧНЫМИ БУКВАМИ**, её делают немного выше строчных, а полуапроши капительных знаков увеличивают.

Great for setting text (showing 10pt)

Zosimo UltraLight & *UltraLight Italic*

Zosimos of Panopolis was a Greek alchemist and Gnostic mystic from the end of the 3rd and beginning of the 4th century AD. He was born in *Panopolis*, present day Akhmim in the south of *Egypt*, ca. 300. He wrote the oldest known books on alchemy. He is one of about 40 authors represented in a compendium of alchemical writings that was probably put together in *Byzantium* (Constantinople) in the 7th or 8th century AD and that exists in manuscripts in Venice and Paris. In about 300 AD, Zosimos provided one of the first definitions of alchemy as the study of “*the composition of waters, movement, growth, embodying and disembodiment, drawing the spirits from bodies and bonding the spirits within bodies.*”

Íslenska

Tycho Ottesen Brahe (fæddur 14. desember 1546 í Knudstrup á Skáni í Danmörku, dáinn 24. október 1601 í Prag) var danskur stjörnufræðingur og gullgerðarmaður. Hann lærði stjörnufræði í Mið-Evrópu, og útskrifaðist árið 1570. Hann var lénsheerra á eyjunni Hveðn á Eyrarsundi, í hirð Friðriks annars Danakonungs. Tycho Brahe missti nefið þann 29. desember 1566 í sverðeinvígi við Manderup Parsbjerg. Í kjölfarið lét hann útbúa fyrir sig gervinef úr gulli og silfri og fékk í framhaldi af því áhuga á gullgerðarlist og læknisfræði. Hann kom heim í apríl 1567 með gervinef sitt. Hann var með afskræmt andlit fyrir lífstíð. Faðir hans vildi helst að hann lærði lögfræði og yrði embættismaður, enda kom hann úr valdamikilli fjölskyldu. Tycho tókst þó hvað eftir annað að fá föður sinn til að senda sig í ferðir til útlanda, til að fullkomna tæki sín til stjörnuskoðunar.

Français

Tycho Brahe (en danois : Tyge Ottesen Brahe), dit «le noble Danois» ou «l'homme au nez d'or» (14 décembre 1546 — 24 octobre 1601), est un astronome danois originaire de Scanie danoise, région historique du Danemark qui fait maintenant partie de la Suède. Il est connu pour avoir établi un catalogue d'étoiles précis pour son époque, ainsi que pour avoir produit un modèle d'univers cherchant à combiner le système géocentrique de Ptolémée et héliocentrique de Nicolas Copernic. Tycho Brahe a pu mener ses travaux en astronomie grâce à l'octroi d'un domaine sur l'île de Ven où il fit construire un observatoire astronomique qu'il appela Uraniborg et une pension annuelle accordés par le roi Frédéric II de Danemark.

Тíхо Бра́ге (14 декабря 1546, Кнудstrup, Дания (ныне на территории Швеции) — датский астроном, астролог и алхимик эпохи Возрождения. Первым в Европе начал проводить систематические и высокоточные астрономические наблюдения, на основании которых Кеплер вывел законы движения планет.

Тюге Браге, более известный под латинизированным именем Тихо, происходил из древнего датского рода, известного с начала XV века. Первые годы провёл в родовом замке Кнудstrup, который тогда принадлежал Дании, но позднее, после датско-шведской войны (1657—1658), вместе со всей южной Скандинавией отошёл к Швеции и теперь называется Кнутсторп (Knutstorps borg).

Српски

Тихо Брахе (Кнудstrup, 14. децембар 1546 — Праг, 24. октобар 1601) је био дански астроном. Студирао у Копенхагену, Лајпцигу, Ростоку и Аугсбургу. Након двадесет четири године астрономских посматрања у Данској, наставио је рад у Бенатки поред Прага. Тихо је био ужаснут када је открио да су Алфонсинске таблице, стандардни извор за планетска кретања, погрешне за читавих месец дана, а Кеплерове за неколико месеци. Године 1572. Тихо је приметио нову звезду у сазвежђу Касиопеја, тако сјајну да се видела и по дану. Касније је утврђено да се радило о супернови. Следеће године објавио је књигу De Stella Nove, пуну чињеница које су потврдиле постојање нове звезде.
